Clinical Examination of Nervous System - PPT

Examination of the peripheral nervous system assumes a stylised approach when adopting the traditional method. This means following a set pattern of: observation and inspection; tone; power; reflexes; sensation; coordination; and gait. This ignores what was stated earlier, namely that the consultation starts long before the patient enters the consultation room.

The neurological examination: Peripheral nervous system ...

A neurological examination is the assessment of sensory neuron and motor responses, especially reflexes, to determine whether the nervous system is impaired. This typically includes a physical examination and a review of the patient's medical history, but not deeper investigation such as neuroimaging. It can be used both as a screening tool and as an investigative tool, the former of which when examining the patient when there is no expected neurological deficit and the latter of which when exam

Neurological examination - Wikipedia
