Introduction. This book provides a comprehensive description of phosphate solubilizing microorganisms and highlights methods for the use of microphos in different crop production systems. The focus is on understanding both the basic and applied aspects of phosphate solubilizing microorganisms and how phosphorus-deficient soils can be transformed into phosphorus-rich ones by applying phosphate solubilizing microorganisms.

Phosphate solubilizing microbes (PSB) converts organic phosphorus into inorganic form through the secretion of acids because of sugar metabolism and ultimately available to the plants. Microbes inhabiting the rhizosphere utilize sugars from root exudates and metabolize them to produce organic acids (Goswami et al., 2014).

Microorganisms are an integral component of the soil P cycle and are important for the transfer of P between different pools of soil P. Phosphate Solubilizing Microorganisms (PSM) through various mechanisms of solubilization and mineralisation are able to convert inorganic and organic soil P respectively (Khan et al. 2009a) into the bioavailable form facilitating uptake by plant roots.

Introduction Natural solubilization of mineral phosphates is an important phenomenon exhibited by different microorganisms, known as phosphate solubilizing microorganisms (PSM). Bacteria are the predominant microorganisms that solubilize mineral phosphate in nature, as compared to other microorganisms.

Phosphate solubilizing microbes (PSMs) are a group of beneficial microorganisms capable of hydrolyzing organic and inorganic insoluble phosphorus compounds to soluble P form that can easily be assimilated by plants. PSM provides an ecofriendly and economically sound approach to overcome the P scarcity and its subsequent uptake by plants.

The use of plant growth-promoting microorganisms (PGPMs) as bio-effectors (BEs) to improve the nutrient acquisition of crops has a long history. However, limited reproducibility of the expected effects still remains a major challenge for practical applications. Based on the hypothesis that the expression of PGPM effects depends on soil type and the properties of the applied fertilizers, in ...
