Project risk management is a well-defined field of study, and numerous books and papers have been written about it. Risk analysis is broadly split into two areas (i.e., qualitative risk analysis, and quantitative risk analysis). Of these two, qualitative risk analysis is most common, and on many projects, it is the only risk analysis that is done.

Human resource management (HRM), the management of work and people towards desired ends, is a fundamental activity in any organization in which human beings are employed. It is not something whose existence needs to be elaborately justified: HRM is an inevitable consequence of starting and growing an organization. This article focuses on the scope of HRM and its major subfields.
