Chemical contaminants are a major concern for the food industry.

Chemical contaminants and residues in food provides an essential guide to the main chemical

contaminants, their health implications, the processes by which they contaminate food products, and methods for their detection and control.

Defatting of lipid-rich food matrices is often required, using hexane or isooctane, prior to the extraction of target contaminants.

Extraction of contaminants and residues is traditionally done by solubilizing them in a suitable organic solvent,
